

APS Contract Manufacturing

Private-label health products made to the highest standards

A person wearing a white lab coat, a hairnet, and a blue face mask is operating a piece of industrial machinery. The machine has a large touchscreen display showing a control interface with various buttons and a diagram. The person's hands are wearing white gloves.

APS produces a wide range of private-label products.

A close-up view of a white plastic tray filled with numerous blue and white capsules. The capsules are arranged in rows, and the lighting is bright, highlighting their texture and colors.

quality control: we ensure the best possible end product.

A woman with dark curly hair, wearing a green button-down shirt, is standing in a pharmacy aisle. She is reaching up to a shelf filled with various bottles of medicine. The shelves are well-stocked with products, and the lighting is bright.

retail-ready packaging:
our products are consumer-ready.

Why APS BioGroup should be your contract manufacturer.

1. Extensive Capabilities to Efficiently Produce Your Product

If you choose a contract manufacturer with inappropriate equipment and systems, you risk inconsistent or inadequate product quality and you may not get the best price because of production inefficiencies.

THE APS ADVANTAGE: APS BioGroup has the capability to efficiently manufacture and package a broad range of consumer-ready retail packaged powders, capsules, chewables, and liquids. Certified Good Manufacturing Practices are followed during all manufacturing and packaging.

In order to manufacture and package these and other private label products, APS BioGroup maintains an inventory of over 500 ingredients.

With our in-house blending capability, we can mix your custom blend and package it or mix it in bulk. APS BioGroup's in-house product formulators are available to assist our customers to create and optimize formulations and flavoring.

2. Tight Quality Assurance Systems

Quality assurance systems and procedures are critical to ensure your specifications and product requirements are consistently met and food safety issues prevented. The quality systems of all contract manufacturers are not the same.

THE APS ADVANTAGE: Quality is our first priority at APS BioGroup and we are very proud to have the most sophisticated quality laboratory in the industry. Our in-house government-certified clinical laboratory has three lab technicians with bachelor's degrees in chemistry or microbiology and a licensed pharmacist. Our well-equipped lab includes three high performance liquid chromatography machines and a quadrupole mass spectrometer, along with other lab equipment. This enables APS BioGroup to test each production lot to ensure that it meets specifications and is free of contaminants.

APS BioGroup follows certified Good Manufacturing Practices during all phases of manufacturing and packaging processes. In addition, our production area is equipped with positive and negative air pressure to prevent cross-contamination.

Bottom: Capsules being filled with fully-automated capsulating machine in APS clean room.

3. Broad Technical Support

A capable contract manufacturer needs scientific and technical expertise available in-house.

THE APS ADVANTAGE: APS BioGroup has an in-house formulator, in-house licensed pharmacist and packaging technicians available to work with you to develop the best formulations, packaging, and manufacturing processes for your products.

4. Excellent Customer Service Systems

Good customer service assures your product requirements and schedule are met and that you are kept informed of any issues.

THE APS ADVANTAGE: APS BioGroup has developed a tested customer service system to ensure that your requirements are met and your product is delivered on time. A key element of the system is a Program Manager APS BioGroup assigns to your project. The Program Manager is your advocate within APS BioGroup and is your contact if you have questions or need to make changes.

5. Competitive Pricing

Pricing policies among contract manufacturers are often different. As a result, the price you will be quoted for a specific product may vary significantly with alternative suppliers.

THE APS ADVANTAGE: APS BioGroup understands the importance of offering competitive prices. Contact us for a specific quote and technical assistance.

There are 5 very important reasons to choose APS as your contract manufacturer:

- 1 Extensive Capabilities to Efficiently Produce Your Product
- 2 Tight Quality Assurance Systems
- 3 Broad Technical Support
- 4 Excellent Customer Service System
- 5 Competitive Pricing

Your Packaging Partner

APS BioGroup manufactures and packages consumer-ready packaged powders, capsules, chewables, and custom formulations.

The APS BioGroup facilities are designed with positive and negative air pressure to prevent cross-contamination. The air in the packaging rooms is replaced every six minutes with filtered air. APS has separate check weight and inspection rooms. A dedicated fully automated capsulizing machine is located in a separate clean room with an independent air handling system to create a separate environment for enzyme capsulating.

The APS BioGroup warehouse has the capability to store up to 3,000 pallets, and availability of ten dock doors for loading and unloading, as well as a dedicated railroad spur.
